Mating Calls

Male adult cicadas sing mating songs and females respond flicking their wings

A male and female cicada mate

Molt Nymph Exoskeleton

On the nearest vertical surface, nymphs molt into the winged adult form

Nymphs Emerge

50

Using internal clocks and thermometers, nymphs emerge from the ground

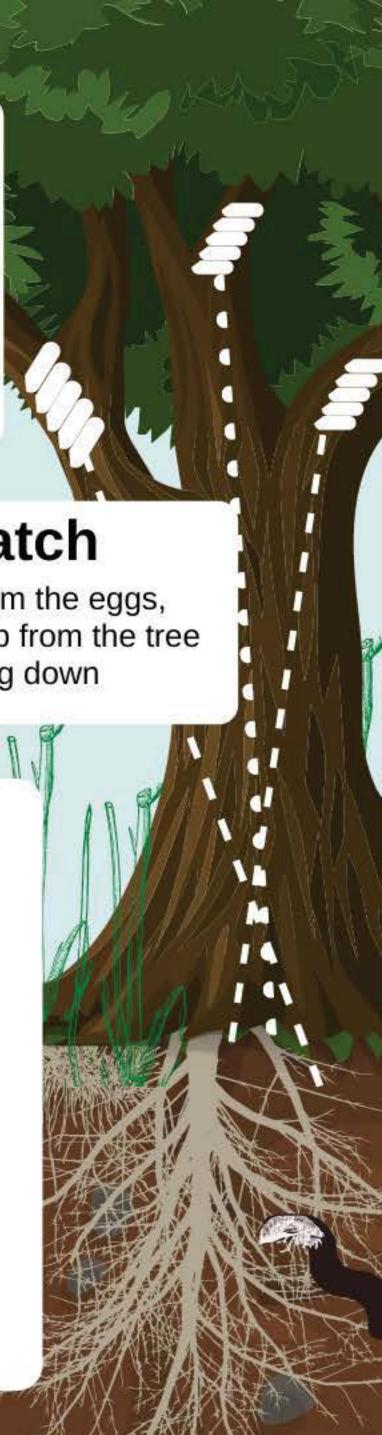

Mate

Lay eggs

The female lays eggs in a groove she has etched in the bark of a tree limb

Cicada Lifecycle

Nymphs hatch

Cicada nymphs hatch from the eggs, briefly feed on sap then drop from the tree to the ground and dig down

Nymphs tunnel & feed

Nymphs tunnel underground looking for and feeding on plant roots; they spend 2-17 years doing this depending on species
